## Work Experience

---

### **Kodama Ltd:** Web Design Intern

London, UK | July 23<sup>rd</sup> – September 21<sup>st</sup>, 2018

- Redesigning and rebranding the website for their new VR product soon to be released; which consisted of researching similar products currently on market, outlining the requirements after mapping out the user journey with the founder, creating low-fidelity prototypes on paper collaboratively with the team to then transform into wire frames in Axure, and developing a custom WordPress template for the website.
- I gained thorough understanding of front-end development and UX design by going to UX masterclasses with the company to learn how to make informed design decisions, as well as working independently and collaboratively during development, whilst gaining constructive feedback from designers and developers.

### **Given London:** Creative Producer Intern

London, UK | August 14<sup>th</sup> – September 7<sup>th</sup>, 2018

- Worked as a team to create a social impact campaign in the form of a short film for O2's Go Think Big project and providing structured, organised materials for the brand agencies side of the project.
- Reviewed in-depth research from online resources which could then be used to write up questions for interviews with experts, that could then be turned into useful insights to present to my team which could be utilised for the creative brief.
- Used my project management and creative development skills to create a manifesto, mood boards, anchor words, reference materials to map out the film's storyboard and shots, whilst following O2's guidelines, budget and timings.

### **Octopus Labs:** Web Developer Work Experience

London, UK | June 26<sup>th</sup> – July 7<sup>th</sup>, 2017

- Planned with a Senior Developer on the best solution to develop my python application given the time frame and my current skills, thus receiving advice on how to use MySQL with Python and deploying apps on the Google Cloud platform.
- Discussed with CTO on each stage of my application to ensure that it fit the requirements and received feedback on improvements that could be made for a better user experience.
- Created a web application using Flask that would make it easier employees to search up the number of cheques they have received rather than ask the reception every time, which involved retrieving information from an API.

## Projects and Leadership

---

### **Queen Mary University:** Group Projects

London, UK | January – March 2018

- Project Leader: Created web application that reduces company's food waste by using Laravel Framework, Bootstrap, Stripe API and MySQL database. Guided team members on how to use the Laravel Framework.
- Lead developer: Weather App application made in React for people who do water sports. Integrated the search function and calling 2 API's with the same call method; then extracted required information from it.

### **Code First: Girls:** Advanced Course for Ruby

London, UK | September – November 2016

- Demonstrated my skills in leading a team to make a website using Ruby on Rails, MYSQL and HTML/CSS for 4 weeks. I covered a mixture of roles from Project Manager, Software developer and UX Designer.
- Improved the website by asking for tutors and team members for feedback, whilst ensuring it would not compromise with other tasks on the timeline.

## Education (Graduating 2019)

---

### **Queen Mary University:** BSc Computer Science

London, UK | September 2016 – Present

First Year – 1<sup>st</sup>, Second Year – 2:1

### **Udacity:** Android Basics Course – Google Developer Scholarship - Passed

Online Course | November 2017 – July 2018

Course Outline: User Interface, User Input, Multi-Screen Apps, Networking (API) and Data Storage (NoSQL)

## Technical Skills

---

**Programming languages:** Intermediate – Java, Python, Ruby, PHP, JavaScript | Advanced – HTML&CSS | Basic – C#

**Applications:** WordPress, Blender, Axure, Android SDK, Laravel, Flask, Ruby on Rails, React, Affinity Designer, Marvel

**Database Systems:** MySQL, SQLPlus, SQLite

## Interests & Achievements

---

- **Hackathons and Technology Events:** Stemettes Food Coding weekend, Intuit Small Business Hackathon, Bloomberg Masterclass(SEO), J.P. Morgan – Code for Good, #AcornHackADA held by Acorn Aspiration, Ada College and Google
- **Volunteering:** Code Club (2017), National Citizen Service (2014), Code First: Girls Instructor (2018), Art Night 2018
- **Societies:** BCS (2015-present), Electronic Engineering and Computer Science(2015-present), Korean Society (2016-present)
- **Hobbies:** I have a passion for art and I regularly go to museums; in the past 2 years I have been to 40+ exhibitions.
